Global Truncation Error Scaling vs Step Size Table (Runge-Kutta)	
Method	**Test 1: Estimate for p $(-)$**
4th Order Method	3.9217
Explicit Midpoint	1.8722
Forward Euler	0.7729

Caption: This finds the p-value (representing the closeness/error to the theoretical values) to the methodologies (4th order Method Forward Euler, Explicit Midpoint).

This is based on gravity rate function ($m_p \frac{d^2 \vec{r}}{dt^2} = \vec{F} = \frac{m_p m_s G}{|\vec{r}|^3}) \vec{r}$
