Global Truncation Error vs Step Size	
Method	**Test 1: Estimate for p (-)**
Ver der Houwen's Wray's 3rd Order	2.9758
Kutta's 3rd Order	2.9903
Ralston's Method	2.0332

Table X: This finds the p-value (representing the ratio of closeness to error from solution) to the methodologies (4th order Method Forward Euler, Explicit Midpoint). Test 1 uses the gravity rate function ($m_p \frac{d^2 \vec{r}}{dt^2} = \vec{F} = \frac{m_p m_s G}{|\vec{r}|^3}) \vec{r}$.
